SUMMARY

I'm a PHP backend developer with over 5 years of experience in web development, including 4 years of freelance work and 1 year as a full-time developer at Epic Systems. Throughout my career, I've delivered reliable and scalable solutions for a variety of clients, focusing on clean code, performance, and secure backend architecture. I'm comfortable working independently or as part of a team, and I take pride in translating business needs into functional, efficient systems. I'm always looking to collaborate on meaningful projects, especially those that require deep backend logic, database structuring, or API integrations.
